Duration	66 days 4 hours
Question 1 Correct	Write a program to input a name (as a single character) and marks of three tests as m1, m2, and m3 of a student considering all the three marks have been given in integer format.
Marked out of 3.00	Now, you need to calculate the average of the given marks and print it along with the name as mentioned in the output format section.
The state of the s	All the test marks are in integers and hence calculate the average in integer as well. That is, you need to print the integer part of the average only and neglect the decimal part.
	Input format :
	Line 1 : Name(Single character)
	Line 2 : Marks scored in the 3 tests separated by single space.
i d	Output format :
	First line of output prints the name of the student.
8	Second line of the output prints the average mark.
	Constraints
	Marks for each student lie in the range 0 to 100 (both inclusive)
	Sample Input 1:
	A
	3 4 6

Sample Output 1:
A 4
Sample Input 2 :
T 738
Sample Output 2 :
T 6

Anguary (populty rogime: 0.96)

	#include <stdio.h></stdio.h>	
2 +	int main(){	
3	char a;	
4	int m1, m2, m3;	
5	scanf("%c", &a);	
6	scanf("%d %d %d", &m1, &m2, &m3);	
7	printf("%c\n", a);	
8	printf("%d", (m1 + m2 + m3)/3);	
9	return 0;	
10		

	Input	Expected	Got	
~	А	А	А	~
	3 4 6	4	4	
/	Т	Т	т	~
	7 3 8	6	6	
~	R	R	R	~
	0 100 99	66	66

Question 2
                     Some C data types, their format specifiers, and their most common bit widths are as follows:
Correct
                           Int ("%d"): 32 Bit integer
Marked out of
                            Long ("%ld"): 64 bit integer
5.00
                            Char ("%c"): Character type
F Flag question
                           Float ("%f"): 32 bit real value
                            Double ("%lf"): 64 bit real value
                     Reading
                     To read a data type, use the following syntax:
                     scanf("`format_specifier`", &val)
                     For example, to read a character followed by a double:
                     char ch:
                     double d:
                     scanf("%c %lf", &ch, &d);
                     For the moment, we can ignore the spacing between format specifiers.
                     Printing
                     To print a data type, use the following syntax:
                     printf("'format_specifier'", val)
                     For example, to print a character followed by a double:
                     char ch = 'd';
                     double d = 234.432:
                     printf("%c %lf", ch, d);
                     Note: You can also use cin and cout instead of scanf and printf; however, if you are taking a million numbers as input and printing a million lines, it is faster to
                     use scanf and printf.
```

input rottilat
Input consists of the following space-separated values: int, long, char, float, and double, respectively.
Output Format
Print each element on a new line in the same order it was received as input. Note that the floating point value should be correct up to 3 decimal places and the double to 9 decimal places.
Sample Input
3 12345678912345 a 334.23 14049.30493
Sample Output
3
12345678912345
a
334.230
14049.304930000
Explanation
Print int 3,
followed by long 12345678912345,
followed by char a ,
followed by float 334.23.

followed by double 14049.30493.

```
Answer: (penalty regime: 0 %)
      #include <stdio.h>
       int main()
    2
           int a;
           long b;
           char c;
           float d;
           double e;
           scanf("%d %ld %c %f %lf",&a,&b,&c,&d,&e);
   10
   11
           printf("%d\n", a);
           printf("%ld\n", b);
   12
   13
           printf("%c\n", c);
   14
           printf("%.3f\n", d);
           printf("%.91f\n", e);
   15
   16
           return 0;
  17 }
```

	Input	Expected	Got	
~	3 12345678912345 a 334.23 14049.30493	3 12345678912345 a 334.230 14049.304930000	3 12345678912345 a 334.230 14049.304930000	~

Passed all tests! <

Write a program to print the ASCII value and the two adjacent characters of the given character. Input P Flag question E Output 69 DF Answer: (penalty regime: 0 %) 1 #include <stdio.h> 2 v int main(){ 3 char a; 4 scanf("%c", &a); printf("%d\n", a); 5 6 printf("%c %c", a-1, a+1); 7 return 0; 8 } Input Expected Got 69 DF DF
